1. Products

This document applies to the following products:

Number	Part Number	Description
1	SGDV-OCA01A	Sigma-5 CANopen over EtherCAT Option Module

2. Bug Fixes

The following issues were identified and fixed for this release.

Number	Fix Summary	Issue Details	Fixed Behavior
1	FW change function	Previous firmware: Module hardware revision C modules contained FW 7.00 which does not support FW change on revision C modules.	Fixed behavior: Module hardware revision C modules are shipped with FW 7.01 or later, which supports the FW change function to FW 6.03. Note: With the exception of the FW change function being corrected: 1. FW 7.01 functions identically as FW 7.00 2. FW 6.03 functions identically as FW 6.00 For additional details about firmware change and checking module hardware revision, refer to Yaskawa.com document AN.MTN.04 .
